

# JBL PROFLORA CO2 TAIFUN COUNT SAFE

CO2 bubble counter with built-in check valve

Suitable for: 

- The bubble counter makes the invisible CO2 gas visible and thus countable. The backflow protection prevents the water from flowing back
- Fill bubble counter with water, connect with hose to CO2 system and diffuser, fix outside the aquarium with 2 suction cups on the glass or 2 screws on the furniture
- The bubble counter allows you to control the CO2 supply: if there is too little CO2 in the water, the bubble count can be increased in a controlled manner
- Safety: hose screw connections prevent accidental loosening of the hoses
- Package contents: CO2 bubble counter with built-in check valve; holder with 2 suction cups/screws; dimensions: 105/175/40 mm

## Product information

### Ideal nutrition for plants

Having the right CO<sub>2</sub> concentration in the water is hugely important for aquarium plants. Carbon dioxide is the plants' main nutrient and it fully promotes their growth. Plants use CO<sub>2</sub> for photosynthesis and this supplies the water with essential oxygen. They remove pollutants, thus preventing algae growth, provide hiding places and reduce germs.

### Easy to install

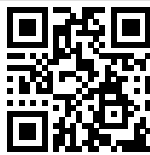

Fill the bubble counter with water. Use the hose to attach the bubble counter to the pressure reducer or solenoid valve of the CO<sub>2</sub> system and to the reactor in the aquarium (CO<sub>2</sub> system and diffuser not included). Fix the bubble counter outside the aquarium with 2 suction cups onto the glass or with 2 screws onto the furniture.

### Safe

The bubble counter has hose screw connections and is easy to fill and clean thanks to a threaded connection with an O-ring. The correct CO<sub>2</sub> amount varies from aquarium to aquarium and depends on the volume, the water movement and the planting. To start, about 10 CO<sub>2</sub> bubbles per minute are recommended. The CO<sub>2</sub> content in the aquarium water can be checked with the help of a CO<sub>2</sub> test (JBL PROAQUATEST CO<sub>2</sub>-pH Permanent).

### The CO<sub>2</sub> bubbles are easy to count

A magnifying glass section in the transparent part makes it easier to count the bubbles for a precise dosing of the CO<sub>2</sub> quantity.
