Microfibre fleece against water cloudiness

Suitable for:

- Fast removal of finest types of cloudiness in freshwater and marine aquariums: quality microfibre fleece for the use in aquarium filters
- Easy to use: individual cut of fleece mat (suitable for all filters). Inlay as last filter stage. Remove material after 12, latest after 24 hours (added fleece indicates how much cloudiness has been removed)
- Crystal-clear water: filters off floating algae, finest types of clouding and all particles of 1/1000 mm upwards, including white spot disease swimmers
- No release of pollutants - water-neutral synthetic fibre
- Contents: 1 microfibre fleece mat 25x74 for aquarium filters

## Product information

### Clean and healthy water

Plant and food remains and metabolic substances lead to a deterioration of the quality of the water in the aquarium. Good water quality is necessary for healthy fish and plants. This can be achieved with various filters and filter materials. The filters suck in the aquarium water and remove the pollution and waste materials with the filter material from the water.

### Easy to use

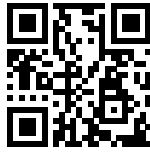

Cut filter floss to a size which is about 1 – 2 mm larger than the relevant cross section and layer it as the last stage of filtration into the filter. Avoid gaps between the inner wall and filter. Use floss single-layered only and remove it after 12 hours, latest after 24 hours, from the aquarium to avoid clogging of the filter and a significantly restricted water flow. Single use per floss cut.

### Fine filtering

The fine material filters even the smallest particles of 1/1000 mm upwards out of the water. Thus floating algae and finest types of clouding can be removed from the water within the shortest time.

### Can be used without fear of side effects

No release of pollutants into the water thanks to neutral microfibre floss.
