

# JBL PROAQUATEST COMBISET Plus NH4

Test case with most important water tests + NH4 test

Suitable for:

- Monitors the water values in aquariums simply and reliably. Determines: pH value, carbonate hardness, nitrite, nitrate and ammonium/ammonia, as well as CO2 calculation using the table
- Easy to use: add aquarium water to cuvette with syringe, add indicator and compare colour on colour scale, or count drops until colour changes in KH test
- Comparator system takes the inherent water colouring into account. CO2-content is determined by pH value and KH value using the table
- Childproof reagent bottles, waterproof plastic case, refill reagents separately available
- Package contents: 1 test case for aquariums, 9 reagents, 3 glass vials, syringe, measuring spoon, comparator block, colour charts, report sheets, operating instructions

## Product information

Healthy aquariums with conditions close to nature

The right water values are dependent on the fish stock and the plants in the aquarium. Even if the water looks clear it can be contaminated. Bad values can cause diseases or algae in the aquarium. To maintain a healthy aquarium with conditions close to nature it is important to check and adapt the water values regularly. With JBL water tests you can determine all relevant water values quickly, easily and very precisely.

The following tests are included in the set:

pH test: acidity of the water from 3.0 to 10

To determine the CO<sub>2</sub> content, it is sufficient to measure the pH and KH. These two values determine the CO<sub>2</sub> content of the water, which can then be found in the enclosed table.

KH test: pH stability of the water (carbonate hardness)

NO<sub>2</sub> test: determination of nitrogen compound nitrite, which is toxic for the fish

NO<sub>3</sub>-Test: determination of the nitrate content (reason for algae growth and plant nutrient)

Test NH<sub>4</sub> / NH<sub>3</sub>: indication of non-toxic ammonium, determination of the toxic ammonia using table

The following tests are available as supplements:

pH test: acidity of the water from 6.0 to 7.6

pH test: acidity of the water from 7.4 to 9.0

O<sub>2</sub> test: determination of the oxygen content

CO<sub>2</sub> Direct test: determination of the current carbon dioxide content for thriving plant growth

Fe test: determination of the iron content to monitor the fertilisation

GH test: determination of general hardness

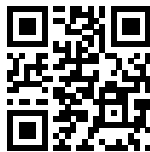

PO<sub>4</sub> test: determination of the phosphate content (reason for algae growth and plant nutrient)

Cu Test: heavy metal deadly for invertebrates. Also important for adjusting the therapeutic dose of medications

SiO<sub>2</sub> test: determination of the silicates (silicic acid) as cause for diatoms

Almost all test reagents are available as environmentally friendly refill packs!

You can analyse the water values you have measured in the JBL Online Laboratory free of charge and receive recommendations.
