## Product information

Especially designed for reptiles and terrarium animals

Terrarium animals' and reptiles' tastes are very different. The right choice of food contributes to the well-being of the terrarium dwellers. Fresh high-value products, such as feeder animals and feeder insects, are part of a balanced diet, suited to their species. Growing juveniles need a lot more vitamins than adult animals. Terravit ensures an ideal supply of vitamins and trace elements for the animals.

### Easy to use

Put living feeder insects into a container and sprinkle them with TerraVit. Close the vessel and shake gently until sufficient TerraVit adheres to the animals.

### Dosing

The right dosage depends on the diversity of the animals and their feeding patterns. Indication: 1 dosing spoon per 100 g food and week. 0.5 to 1 dosing spoon per feed for animals which feed only in longer time intervals.
