

JBL PROCLEAN AQUA EX 45-70

Gravel cleaner for cleaning 45-70 cm aquariums

Suitable for:

- Sophisticated and highly effective gravel cleaner to siphon off waste in aquariums from 45 cm height upwards
- Use: shake the gravel cleaner, let water flow into the bucket, siphon the waste out of the substrate, close the stopcock when finished
- The round gravel cleaner has one corner which helps you move the dirt and reach the corners of the aquarium when you turn it
- Safe for the animals: the protective sieve can be removed for cleaning and prevents plants, shrimps and fish from being accidentally sucked in
- Package contents: 1 gravel cleaner with suction valve, Ø 4 cm, length 27 or 46 cm, incl. 2 m hose (12/16 mm), 2 hose clips, stopcock

Product information

Regular water change

Food, plant remains and metabolic products pollute the aquarium water. Since aquarium filters can't completely remove these substances from the water and a large part of the waste enters the aquarium bottom, a regular partial water change (about every 2 weeks 1/3 of the water content) needs to be carried out. Always siphon off the waste from the substrate when carrying out a partial water change. After the partial water change a good water conditioner such as JBL Biotopol is vital to prepare the new tap water for fish.

Simple to use:

Hold the gravel cleaner underwater in the aquarium, shake it up and down and hold the end of the hose inside the bucket. Water will then flow into the bucket. Clean the bottom with the gravel cleaner. To finish, simply remove the gravel cleaner from the water or/and close the stopcock at the end of the hose.

How to clean the aquarium bottom properly:

Push the gravel cleaner into the aquarium substrate with twisting movements. The suction pulls the substrate and the dirt in the gravel cleaner upwards. The substrate falls back down under its own weight and only the dirt is sucked out of the aquarium. With fine sand, you can adjust the suction by lifting the gravel cleaner so that the light sand also falls back down. A sieve in the bell of the cleaner prevents fish and shrimp from being accidentally sucked in. The sieve can be removed for cleaning.

If you have a long-term substrate fertiliser under the covering gravel layer (e.g. JBL PROFLORA AQUA BASIS), do not insert the gravel cleaner far. Insert it only as deeply as the covering substrate layer is thick.
