

JBL PROFLORA CO2 TAIFUN INLINE

CO2 diffuser for installation in external filter hose

Suitable for: 

- Very efficient CO2 enrichment for perfect plant growth in the aquarium thanks to its installation inside the filter return hose
- Cut the water return hose from the external filter, water the membrane of the diffuser, install the INLINE DIFFUSER, connect the CO2 supply hose, adjust the bubble count
- Bubble counter, for checking the amount of CO2 added, is integrated. Water backflow protection, to protect the technical parts, is also integrated
- 20 % CO2 savings thanks to particularly effective diaphragm
- Includes: 1 ready-to-connect high-performance CO2 direct diffuser, wall mount, suction cup and screw attachment

Product information

Ideal nutrition for plants

Having the right CO₂ concentration in the water is hugely important for aquarium plants. Carbon dioxide is the plants' main nutrient and it fully promotes their growth. Plants use CO₂ for photosynthesis and this supplies the water with essential oxygen. They prevent algae growth, remove pollutants, provide hiding places and reduce germs.

Efficient enrichment of the aquarium water with CO₂:

Inside the diffuser is a special diaphragm through which the CO₂ diffuses into the aquarium water, which is pumped back into the aquarium by the external filter. The very small CO₂ bubbles dissolve very well in the water and save about 20 % compared to other CO₂ diffusers.

Easy to install

The direct diffuser needs to be integrated into the hose as close as possible to the external filter canister in order to extend the distance of the CO₂ in the hose as much as possible. A vertical installation position allows the best readability of the integrated bubble counter.
