

JBL PROFLORA CO2 TAIFUN SPIRAL EXTEND

Extension for JBL PROFLORA CO2 TAIFUN SPIRAL 5 / 10

Suitable for: 

- Extension module for CO2 reactors for changing to larger aquariums or for higher water hardness
- Simple installation: disconnect the bottom module with the hose from the JBL TAIFUN SPIRAL reactor, insert the extension module, put it back together - done
- Extension of the diffusion path = more CO2 enrichment, 5 module parts with a height of 16 mm each, increases capacity by 200 l aquarium content
- Sturdy Makrolon, can be completely dismantled, easy to clean, increases the output by 10 °dKH or 200 l at 4° dKH
- Package contents: extension for CO2 high diffusion reactor incl. 1 holding clip and 1 suction cup

JBL PROFLORA CO2 TAIFUN SPIRAL EXTEND

Spare parts

JBL Suction cup with clip 37 mm

Rubber suction cup with clip for objects of 37-45 mm

JBL PROFLORA CO2 TAIFUN SPIRAL EXTEND

Product information

Ideal nutrition for plants

Having the right CO₂ concentration in the water is hugely important for aquarium plants. Carbon dioxide is the plants' main nutrient and it fully promotes their growth. Plants use CO₂ for photosynthesis and this supplies the water with essential oxygen. They prevent algae growth, remove pollutants, provide hiding places and reduce germs.

Efficient enrichment of the aquarium water with CO₂:

The CO₂ gas enters the lowest module through the CO₂ supply hose in the middle of the reactor. There it enters the bends of the CO₂ reactor in bubbles (visible and thus countable) and rises upwards in a circle, like in a car park driveway. On this long path, the CO₂ dissolves from the CO₂ bubbles in the aquarium water. In this way, the CO₂ system supplies the aquarium plants with their main nutrient, carbon dioxide.

Why don't the CO₂ bubbles dissolve completely?

On their way up, the bubbles release CO₂ into the aquarium water, but at the same time absorb other gases from the water, because these gases are more concentrated in the aquarium water than in a CO₂ bubble. Therefore, the CO₂ content in the bubble decreases and, for example, the oxygen and nitrogen gas content increases. At the end of its journey through the CO₂ reactor, it has clearly become less, but it only contains as much CO₂ as the surrounding water and all the gases that are also contained in the aquarium water.

Extension:

If the desired CO₂ content is not achieved even though the bubble count has been increased, the reactor can be extended by adding further modules. This extends the path for the CO₂ bubbles and more CO₂ can be added. The only limitation is the height of the aquarium.

Features	
Product name	JBL PROFLORA CO2 TAIFUN SPIRAL EXTEND
Art. No.	6468600

Features	
Animal species	Arowana, Axolotl, Barbels, Bettas, Bichirs/reedfish, Blowfish, Catfish, Cichlids (South America), Crayfish, Danions, Discus, Dwarf shrimps, Flowerhorn, Goldfish, Gouramis, Guppy, Juvenile fish, Killifish, Livebearers, Loaches, Panchaxes, Rainbowfish, Snails, Spiny eels, Tetra, Veiltails, freshwater butterflyfish
Animal size	For all animal sizes
Animal age group	All aquarium fish
Volume of habitat	200 L
Material	plastic (PC)
Food type	-
Colour	transparent / black
Dosage	-
Transport conditions	-
