

# JBL FilterStart Pond

Bacteria starter for pond filters

Suitable for: 

- For use with a new filter, after filter cleaning or after medication treatment: granulate with autotrophic bacteria cultures to activate the pond filters quickly
- Add little water to the granulate with bacterial concentrate and spread it on the pond filter material
- Healthy pond filter: activates the filter quickly (within a few days) and prolongs the filter's service life.
- Merely waiting for a healthy bacterial population takes a very long time, even in ponds, because useful bacteria develop only slowly in a new pond without water pollution. Bacteria only react and reproduce when there is a lot of food (NH<sub>4</sub>, NO<sub>2</sub>)
- Package contents: granulate enriched with pollutant-degrading bacteria. Dosage: 250 g granulate for 10,000 l pond water

# JBL FilterStart Pond

## Product information

### Activating a pond filter:

Bacterial colonisation of a pond filter takes several weeks, during which problematic pollutants can already accumulate in the pond water. The JBL FilterStart Pond activates the pond filter within a few days and thus achieves clean and healthy pond water.

### FilterStart Pond is easy to use

Moisten the filter material and sprinkle the complete tin content on top. Allow it to take effect for 2 hours before switching the filter on. Do not bathe in swimming ponds for 24 hours after use.

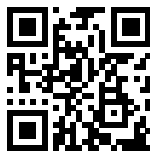

Dosage: 250 g granulate for 10,000 l pond water.

### Advantages of the JBL bacterial starters

Live autotrophic bacteria, breakdown of ammonium/ammonia and nitrite through active bacteria, breakdown of fish excrement and other waste.

Autotrophic bacterial strains grow somewhat more slowly than heterotrophic bacteria, but are faster and more efficient when breaking down pollutants (nitrification).

8 complementary bacteria cultures to break down protein, ammonium and nitrite.
