

JBL PROFLORA u95

Disposable CO2 cylinder

Suitable for:

- Best feeding of fast and slow growing plants in small aquariums
- Easy to install: screw pressure regulator fitting with the rearward internal thread onto the external thread of the storage cylinder. Pressure display on pressure gauge
- Disposable cylinder, ready-filled with carbon dioxide. Non-refillable. Suitable for fertiliser system JBL ProFlora u201
- Maximum safety: tested to 275 bar
- Package contents: disposable cylinder 95 g, ProFlora u95, height: 17.5 cm, Ø 4 cm

JBL PROFLORA u95

Product information

Nutrition for aquarium plants

Healthy plants are important for every aquarium. Plants supply the aquarium with vital oxygen for the aquarium dwellers, prevent algae growth and remove pollutants.

Healthy plants = healthy fish

Healthy plants prevent algae growth, supply oxygen, remove pollutants, provide hiding places and reduce pathogens.

For the plants to flourish the following demands need to be met:

Light as energy source for the photosynthesis of CO₂, nutrients and trace elements as growth promoters.

JBL fertilisers supply the plants with all main nutrients and essential trace elements through the water.

This way the plants can absorb all the required nutrients they need over the leaves and roots.

The capacity of a CO₂ system depends on various factors. The carbonate hardness, the quantity and species of the plants and the strength of the water surface movement are decisive.
