

JBL PROFLORA m500 SILVER

Refillable storage cylinder with 500 g CO₂

Suitable for:    

- Ideal CO₂ fertiliser supply for fast and slow growing aquarium plants
- Easy to use and effective: refillable 2 kg reusable cylinder (thread W 21.8 x 1/14)
- Reusable storage cylinder, ready filled with carbon dioxide – refillable
- TÜV tested, pressure cylinder with overpressure relief. A stand is required to ensure a steady position
- Package contents: refillable cylinder filled with 500 g CO₂. Dimensions: 43 x 11 cm, thread W 21.8 x 1/14

Product information

Disposable or reusable CO2 cylinder?

There are 2 different cylinder types: disposable cylinders that are disposed of and recycled after emptying and reusable cylinders that can be refilled again and again. Many pet shops and gas companies can carry out the refilling. If you, for example, live in a region where refilling is a problem, the disposable cylinder would be an alternative. Should the refilling situation improve, you can always convert the disposable pressure reducer into a reusable pressure reducer in 2 minutes by unscrewing the adapter (JBL PROFLORA ADAPT u-m). Aquarists who live on islands, for example, are sometimes not allowed to transport filled reusable cylinders on the ferry or plane. Disposable cylinders are then sometimes allowed!

The size of the cylinder often depends on the cabinet in which the CO2 storage cylinder is to be placed: A 500 g disposable bottle is only 31 cm high (plus pressure reducer = 37 cm), a 500 g reusable bottle with stand is already 43 cm high and a 2000 g bottle 45.5 cm high. Basically, of course, a larger cylinder is an advantage, because it simply needs to be replaced or refilled less frequently.

TÜV inspection of the CO2 cylinders:

All reusable CO2 cylinders must be inspected regularly, every 10 years, by the TÜV (at least in Germany). On the cylinder you will always find, but sometimes badly legibly, the date of the last TÜV inspection and sometimes the year of the next inspection.
