## Product information

### Clean and healthy water

Plant and food remains and metabolic substances lead to a deterioration of the quality of the water in the aquarium. Good water quality is necessary for healthy fish and plants. This can be achieved with aquarium filters. The filters suck in the aquarium water and remove the pollution and waste materials from the water. Filters also offer an ideal habitat for bacteria which decompose harmful substances.

### Perfect for planted aquariums

Ideal water backflow from the internal filter, whose wide jet pipe leads the water into the aquarium without dispelling too much CO<sub>2</sub>.

### Easy to install

Fit diffuser onto the water outlet of the internal filter. The set also fits all 12/16 mm hose connectors. The wide jet pipe is sideways adjustable.
