Product information

Modelled on nature

Terrarium animals are cold-blooded animals, which are strongly dependent on light, particularly on the quality and intensity of the light and the heat. Activity, food intake, digestion or rest phases are influenced by the change of day and night. Depending on the light source, there are differences in output and quality of the light.

Ideal heat radiation

ReptilHeat ensures an ideal heat distribution in terrariums. The dark emitter covers the heat requirement of the reptiles. ReptilHeat does not emit visible light and needs to be equipped with heat protection. Ideal for nocturnal animals which require warmth without light.
