

# JBL

## Perfect water without any problem!

Clean water the natural  
way, without chemicals

# What can JBL Clynotl do?

Eliminates natural and chemical discoloration

Eliminates slight particle cloudiness

Absorbs proteins

Absorbs ammonium

# How does JBL Clynol work?

JBL Clynol is composed solely of natural pulverized minerals, which are extracted by mining. These minerals have the amazing characteristic of being able to absorb certain substances (see Page 2: What can JBL Clynol do?). For this reason they have become a valued raw material for waste water treatment, aquarium-keeping and pond management.

These minerals have “adsorbitive” properties, i.e. they can bind substances firmly to their surface. The substances listed above are bound by means of electrostatics, familiar to many people from everyday life (rub wool – hair stands on end, friction on a car seat – electric shock etc.). This electrostatic attraction works like a magnet, drawing the substances listed. In order to exploit the effectiveness of these minerals to the full, they are ground to a fine powder in a special process and dissolved in a neutral liquid. Since they settle on the bottom of the bottle, the bottle should be shaken thoroughly before use.

## Does these minerals have any disadvantages?

These minerals have been used in aquarium-keeping for many years and so far no undesirable side-effects have been observed.

It has been observed that fish actively like to have contact with the “mineral cloud” when JBL Clynol is freshly added to the aquarium water. The explanation given by vets is that the fish like the slightly “abrasive” effect of the fine mineral particles and use the cloud to “scratch” themselves in places that would not otherwise be reached.

**!** JBL Clynol should not be combined with JBL Clearol, as JBL Clearol is a flocculent which would cause JBL Clynol to clump together and become ineffective.

**Absorbs heavy metals, such as lead, copper, nickel, zinc etc.**

**Absorbs traces of medication**

**Absorbs unpleasant odors in the water**

**Eliminates some bacterial cloudiness**
