

T8 fluorescent tube for intensive colours

Suitable for: 🔍 🐋

- Fluorescent tube Solar for vibrant colours in freshwater aquariums, promotes plant growth.
- Easy to install: Insert fluorescent T8 tube socket into the fixture and turn until the tube locks into place
- Increased spectral red and blue content creates intensive colours: full colouring of fish and plants
- Excellent illumination from high lumen output. Scientifically tested by IFM Geomar: full spectrum similar to sunlight
- Colour rendering and full spectrum are guaranteed for 12 months. Includes reminder label for replacement

JBL Start Solar Starter for T8 fluorescent tubes

JBL SOLAR REFLECT Clip Set Holder for fluorescent tubes

JBL SOLAR Reflect T5/ T8 438-850 mm High-performance reflector panel for fluorescent tubes

JBL Clips T5/T8 (Metal) Metal holder für fluorescent tubes

JBL SOLAR Reflect T5/ T8 - 895-1500 mm Reflector panel for fluorescent tube

**Final Product information** 

### Light as energy source

Plants provide the aquarium with the oxygen vital for the aquarium dwellers. Plants prevent algae growth, remove pollutants, provide hiding places and reduce pathogens. The right full-spectrum light is important to achieve full photosynthesis.

#### Easy to install

Insert the fluorescent T8 tube socket into the fixture and turn until the tube locks into place.

#### Nature as a model

With its light colour and its spectral distribution of the light the tube meets the needs of the plants. It supports their growth and their photosynthetic performance. The light, equivalent to sunlight, inhibits the growth of algae. The warm light with increased spectral red and blue content means plants and fish present themselves in their natural beauty.

#### The full daylight spectrum

JBL full-spectrum tubes create light conditions modelled on nature and reproduce a balanced natural lighting. Tested by the IFM-Geomar Leibnitz-Institut für Meereswissenschaften and rated as very good and "comparable to natural sunlight". With energy efficiency class B the tube is particularly energyefficient.

Correlation between light spectrum and light intensity: To create a very light tube you only have to intensify the yellow-green spectral range. Adding a little more red and blue will prevent the light from looking too yellow. That's how it is done with most tubes! However, we don't want to illuminate a living room but a planted aquarium with different demands, including ALL the spectral ranges of visible light (rainbow colours) to promote perfect growth. That's why JBL has designed "full-spectrum tubes", which include all the spectral ranges with NOTHING missing. In return they are slightly less light than other fluorescent tubes. The output of a tube is always 100%, but it is important to know which spectral ranges they cover! it is important to know which spectral ranges they cover!
