## Product information

### Ideal nutrition for plants

Having the right CO2 concentration in the water is hugely important for aquarium plants. Carbon dioxide is the plants' main nutrient and serves to promote their full development. Plants use CO2 for photosynthesis and this supplies the water with essential oxygen. They prevent algae growth, remove pollutants, provide hiding places and reduce germs.

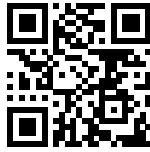

Efficient enrichment of the aquarium water with CO2: The diffuser contains a special diaphragm through which the CO2 diffuses into the aquarium water. The very small CO2 bubbles dissolve very well in the aquarium water.

JBL offers the TAIFUN GLASS diffuser in 3 sizes:

JBL PROFLORA CO2 TAIFUN MINI: for aquariums from 40-120 l, 72 mm high, 37 mm wide without the suction cups, 25 mm diameter of the diffuser

JBL PROFLORA CO2 TAIFUN MIDI: for aquariums from 40-300 l, 76 mm high, 42 mm wide without the suction cups, 30.5 mm diameter of the diffuser

JBL PROFLORA CO2 TAIFUN MAXI: for aquariums from 160-800 l, 90 mm high, 58 mm wide without the suction cups, 40 mm diameter of the diffuser
