

# JBL PROFLORA Ferropol

Plant fertiliser for freshwater aquariums

Suitable for:

- Primary care for water plants: basis fertiliser for freshwater aquariums
- Vigorous plant growth, no deficiency symptoms thanks to minerals such as iron, potassium and other trace elements
- For intensive leaf colouring thanks to its ideal concentration and compound of iron
- Optimal promotion of plant growth means less algae growth. No phosphates and nitrates. Not harmful to crayfish and shrimps
- Contents: 1 bottle Ferropol. To use: 10 ml/40 l water. Environmentally friendly refill bag available

# JBL PROFLORA Ferropol

## Product information

### Nutrition for aquarium plants

Healthy plants prevent algae growth, supply oxygen, remove pollutants, provide hiding places and reduce pathogens.

### Healthy plants = healthy fish

For the plants to flourish the following demands have to be met:

Light (provides an energy source for CO<sub>2</sub> photosynthesis), nutrients and trace elements (operate as growth promoters).

JBL fertilisers supply the plants with all their main nutrients and essential trace elements. This way the plants can absorb all the required nutrients they need over the leaves and roots, and deficiency symptoms (e.g. iron deficiency) are thus prevented.

Don't get confused: The label says "...complex stability at pH 4-5." This means that JBL Ferropol has a pH value of 4-5. This is necessary to keep the greenish colour (colour complex) stable and has nothing to do with whether it is effective at this pH value. JBL Ferropol can be used at all pH values and the availability of the contained minerals increases with increasing pH value.
