

# JBL Maris

Main food flakes for marine fish

Suitable for:

- Complete nutrition and ideal growth for marine fish: over 50 natural ingredients in 6 food flakes with protein-rich krill flakes and spirulina algae
- Nutritious and easy to digest: ideal feeding conditions due to various flake sizes for fish species 5 - 20 cm in all water layers
- No water clouding: reduced algae growth thanks to balanced phosphate content. Better water quality due to better digestibility of the food, which reduces fish excrement
- Fish choose JBL food: 98.5% of all fish species immediately ate the JBL food during our research expeditions in tropical coral reefs. No processing of cheap fishmeal, fish meat from fish fillet production for humans is used
- Contents: main food, for aquarium fish. After opening use up within 4 months. Can be stored unopened in high-quality packaging with foil seal for 3 years.

## Product information

Animal welfare is important to us

No processing of cheap fish meal, uses fish meat from fish fillet production with the motto: The large fillet is for humans and the small fillet is for the aquarium fish! For years JBL has supported the largest international organisations for the protection of sharks "Shark Project" and SHARK SCHOOL.

As the food chains in the oceans can be extremely complicated and also extensive, it is important that you are well informed about the food requirements of your marine fish.

The most popular aquarium fish for marine aquariums can be fed well and healthily for decades with today's modern feeds.

Ahead through research

The results of the JBL research expeditions, combined with the expertise of the JBL research and development team, has resulted in optimal and balanced food mixtures made of high-quality ingredients.
