

JBL PRONOVO RED GRANO M

NEW

Granulated staple food size M for 8-20 cm goldfish

Suitable for:

- dedicated dietary fibres in the food supply the beneficial intestinal bacteria with food for a healthy digestion
- Natural raw ingredients without artificial additives for a natural diet and healthy goldfish. Developed together with top Asian breeders
- Very high acceptance even in goldfish breeds, thanks to high-quality raw ingredients such as salmon, shrimps and spirulina
- With very high-quality natural astaxanthin from krill and spirulina, which ensures perfect colour formation in goldfish and goldfish breeds
- Package contents: original sealed, air- and light-tight, recyclable tin with dosing lid as feeding aid

JBL PRONOVO RED GRANO M

Product information

Goldfish - the most popular ornamental fish of all!

About 1000 years ago, the beautiful colours were bred out of crucian carps (cold-water fish) in China and the goldfish was created, complete with its own scientific name (*Carassius auratus*). Goldfish and its related breeding forms have no stomach and are omnivores that can develop a healthy appetite for aquatic plants. JBL PRONOVO RED INSECT goldfish food contains a high proportion of vegetable ingredients which reduce this hunger for aquatic plants. Insects and insect larvae form an important part of their diet alongside plants. This has also been taken into account in the JBL PRONOVO food by adding black soldier fly larvae.

Why do we need a special goldfish food?

Goldfish are descended from the crucian carp, which comes from fairly cool waters. In a cold environment, the metabolism is slower and the main food therefore requires a lower protein content than food for tropical ornamental fish. In addition, the goldfish likes to eat plant food. The goldfish enthusiast will notice this at the latest when his goldfish have wiped out all the plants. The JBL goldfish food PRONOVO RED therefore contains a high proportion of plants. Often, but not always, this reduces the fish's hunger for plants...

Probiotic or prebiotic - which is better?

Prebiotics are "substrates that are selectively used by host microorganisms and impart health benefits." Scientists are agreed on this that they promote digestion and thus health. In the case of our fish, there is another essential aspect: With a better digestive system, less food is excreted and thus the water is less polluted, causing fewer algae problems and keeping the water cleaner.
