Product information

Healthy Pond Environment

A freshwater supply, such as rain, tap or well water can have a negative influence on pond water. Through a regular check of the water values negative changes can be detected and remedied immediately to maintain a healthy pond environment.

Healthy Fish – Healthy Pond

Thanks to its valuable plant extracts and vitamins the water conditioner AccliPond activates the resistance of pond fish and promotes their vitality and health. AccliPond ensures stress-free fish transport and supports the acclimatisation of pond fish. Iodine contributes to a normal energy metabolism. Folic acid is a water soluble B vitamin and ensures the immune system functions normally.

Use remedies correctly. Shake the bottle vigorously. Mix the required quantity with pond water in a watering can and distribute it evenly over the pond.

Dosage

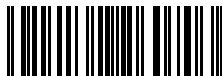

40 ml per 800 l pond water.
