

JBL Fe Iron Test

Quick test to determine the iron content in the water

Suitable for:

- Simple and reliable monitoring of the aquarium/pond water values. Determines the ideal iron content in freshwater and marine water
- Laboratory comparator system to compensate any inherent water colouring: fill glass cuvette with sample water, add reagents to another cuvette, place cuvettes in holder, read values on colour chart
- When to use: for setting up a new aquarium: 1 x after setting up, afterwards weekly. In case of green algae problems or when plants don't grow properly
- Online Laboratory: free analysis and recommendations for the water values you have measured
- Package contents: 1 quick test, Iron Test Fe. Contents for approx. 50 measurements, incl. reagent, 2 glassvials with screw cap, syringe, comparator block and Fe colour scale. Refill reagent available separately

Product information

Healthy aquarium/pond with conditions close to nature

The right water values are dependent on the fish stock and the plants inside the aquarium/pond. Even if the water looks clear it can be contaminated. With bad values diseases or algae can appear in the aquarium. To maintain a healthy aquarium/pond with conditions close to nature it is important to check and adapt the water values regularly.

For each water analysis JBL provides water tests in the form of quick tests or colour change tests. These determine a certain value or several values in one go. With these water tests you can recognise algae problems and negative nitrate, nitrite, potassium, magnesium values etc.

In addition to a sufficient CO2 supply, iron and trace elements are essential for water plants. Strongly growing aquatic plants permanently need iron and other trace elements, and these are only durable for a limited period during the coupling to so-called chelates, a common feature in modern fertiliser preparations (e.g. JBL Ferropol, JBL Fe +Microelements), so regular monitoring with the JBL Iron Test Fe is needed, along with repeated fertilisation if necessary. Pond owners should check their well water for iron before using it for their pond. Too high iron content can lead to problems in the pond.

JBL Online Laboratory

Regular control for a healthy aquarium with conditions close to nature. Enter your water values into the JBL Online Laboratory and get an in-depth analysis of your values within seconds.

Recommended iron contents:

Freshwater aquarium (community aquarium): 0.05-0.2 mg/l

Lake Malawi/Lake Tanganyika aquarium: 0.05-0.2 mg/l

Plant aquarium with few fish (aquascaping): 0.1-0.5 mg/l

Marine aquarium: 0.002-0.05 mg/l

Pond: 0.05-0.1 mg/l.
