

JBL PROAQUATEST LAB PROSCAPE

Test case for water analysis in plant aquariums

Suitable for:

- Monitors the water values in aquariums simply and reliably. Determines: pH value, carbonate hardness, CO2 direct, iron, magnesium freshwater, potassium, phosphate, silicate and nitrate
- Add the reagents to the water samples, compare on the colour chart, read off the values and check the analysis sheet to see which actions are recommended, if any
- Comparator system takes the inherent water colouring into account (compensating it)
- Contains a childproof reagent bottle in a waterproof plastic case. Refill reagents are separately available
- Package contents: 1 test case incl. 22 reagents, 12 glass vials, 1 special potassium cuvette, 2 syringes, 3 measuring spoons, thermometer, comparator block, 2 plastic cuvettes, colour charts, pen, report sheets, operating instructions

Product information

Perfect plant growth is not rocket science!

Once you have used these water tests in your aquarium water to measure the water values relevant for plant growth, you will know exactly whether and what your aquatic plants lack for healthy growth. Only then can you add the missing elements, such as potassium, with a suitable fertiliser (JBL PROSCAPE K MACROELEMENTS).

The following tests are included in the test case:

pH test: water acidity from 6.0 to 7.6

CO2 Direct test: determination of the current carbon dioxide content for thriving plant growth

KH test: pH stability of the water (carbonate hardness)

PO4 test: determination of the phosphate content (reason for algae growth and plant nutrient)

NO3 test: determination of the nitrate content (reason for algae growth and plant nutrient)

Fe test: determination of the iron content to monitor the fertilisation

K test: determination of the plant nutrient potassium

Mg test Freshwater: determination of the important mineral magnesium for healthy plant growth

SiO2 test: determination of the silicates (silicic acid), which cause diatoms

The following tests are available as supplements:

pH test: water acidity from 3.0 to 10

pH test: water acidity from 7.4 to 9.0

O2 test: determination of the oxygen content

GH test: determination of the general hardness

Test NH4 / NH3: identifies non-toxic ammonium, uses table to determine any toxic ammonia

NO2 test: determination of nitrogen compound nitrite, which is toxic for the fish

Cu Test: heavy metal deadly for invertebrates. Also important for adjusting the dose of therapeutic medications

Almost all test reagents are available as environmentally friendly refill packs!

You can analyse the water values you have measured in the JBL Online Laboratory free of charge and receive recommendations.
