

JBL PRONOVO BEL HOLIDAY

NEW

Holiday food for all freshwater aquarium fish

Suitable for: 

- Provide your aquarium fish with a food store for up to 14 days
- Use: place the food block in the aquarium. It sinks to the bottom and provides food for about 25 ornamental fish up to 10 cm in size for up to 14 days
- The block consists of a calcium compound that adds some general hardness to the water when dissolved. It dissolves slowly as the fish intake the food
- Natural raw ingredients without artificial additives for a natural diet and healthy aquarium fish. Tested on JBL research expeditions in the tropics
- Package contents: 1 food block for feeding 25 fish for up to 14 days

JBL PRONOVO BEL HOLIDAY

Product information

Aquariums contain the easiest pets to care for during a weekend or holiday trip! Only very few fish species cannot be fed with commercially available food and will only accept live food.

For a weekend or longer holiday, the aquarium owners have a choice: either feed JBL PRONOVO BEL WEEKEND (for 3 days) or JBL PRONOVO BEL HOLIDAY (for 2 weeks) or use an automatic feeder (JBL AUTOFOOD), which is filled with their preferred food granulate.

Most aquarium fish, excluding juveniles, can even manage without food for a day or two - just like in the wild. But a lot of aquarium owners may feel uncomfortable with this and that's why we have JBL PRONOVO BEL WEEKEND for short absences.

The food blocks in JBL PRONOVO BEL HOLIDAY and WEEKEND are made of a natural calcium compound which slowly dissolves when the fish "nibble" on it.

Bottom-dwelling fish such as armored catfish or loaches also quickly smell the food it contains and then come to feed when they need to. Be careful when you ask neighbours to feed your fish! Most people mean well but massively overfeed! Large amounts of food then lie uneaten on the aquarium floor and spoil. This leads to serious problems with oxygen levels and toxic nitrite, which then builds up. A holiday food or an automatic feeder (or aquarists as neighbours) are better!
