Product information

Nutrition for aquarium plants

Healthy plants are important in every aquarium. Plants provide the aquarium with vital oxygen for the aquarium inhabitants, prevent algae growth and remove problem-causing substances.

Healthy fish = healthy plants

Healthy plants prevent algae growth, supply oxygen, remove pollutants, offer hiding places and reduce pathogens. For the plants to flourish the following demands need to be met: Light as an energy source for the photosynthesis of CO₂, nutrients and trace elements to promote growth. JBL plant fertilisers supply the plants with all their main nutrients and essential trace elements through the water. This way the plants can absorb all the required nutrients they need over the leaves and roots.
