

JBL PROFLORA Taifun Extend

Extension for CO2 high-performance diffuser

Suitable for:

- Extension module for CO2 diffusers for the change to bigger aquariums or for harder water
- Easy integration into the JBL Taifun diffuser
- Extends diffusion path by 8 cm, increase of CO2 supply: suitable for all common CO2 systems, 5 modular parts of 16 mm each in height
- Sturdy Makrolon, can be completely dismantled, easy to clean, increases capacity by 100 l at 10 °dKH or 200 l at 4 °dKH
- Package contents: extension for CO2 high-performance diffuser, ProFlora Taifun Extend, incl. 1 retaining clip, 1 suction holder

Product information

Uniform enrichment

The JBL diffuser supplies aquarium water with the main plant nutrient carbon dioxide in uniform bubbles.

Easy installation

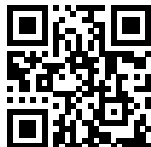

Pull off the lower end cap of the JBL Taifun, remove the hose and insert the extension modules in between. Push the hose through, attach to the lower end cap and push the end cap back onto the extension modules. Now your diffuser has been extended by the extension modules.

Effective

The right amount of CO₂ is different for each aquarium and depends on the volume, water movement and planting of the aquarium. The CO₂ content can be checked by means of a CO₂ test.

How exactly does CO₂ enrichment work?

In the JBL PROFLORA TAIFUN S5 and M the CO₂ bubbles rise upwards as in a round parking garage driveway and dissolve in the parking garage i.e. in the aquarium water. A residual of bubbles still reaches the top, but it hardly contains any CO₂. On its way up the bubble has also absorbed gases from the aquarium water (O₂ etc.). So don't worry about wasting too much CO₂! For the very concerned, the bubble remains are collected in a chamber at the top. Both diffusers TAIFUN S5 and M can be extended with modules (JBL PROFLORA TAIFUN Extend) if your aquarium requires more CO₂ or if you are changing to a larger aquarium. Their length is only limited by the aquarium height.
