

JBL PRONOVO SPIRULINA FLAKES M

NEW

Spirulina green food flakes for 8-20 cm aquarium fish

Suitable for: 

- Floating, prebiotic spirulina algae food flakes for herbivorous (plant/algae-eating) aquarium fish such as livebearers and growth eaters from Lake Malawi and Lake Tanganyika
- Natural raw ingredients without artificial additives for a natural diet and healthy aquarium fish. Tested on JBL research expeditions in the tropics
- Very high acceptance even in choosy fish species thanks to high-quality raw ingredients such as spirulina platensis, salmon and shrimps
- Very high spirulina algae content of 20 % for healthy fish and optimal colour formation. Since blue-green algae are only eaten in moderation by fish in the wild, the spirulina content should not exceed 20%
- Package contents: original sealed, air- and light-tight, recyclable tin with dosing aid in the lid (for 100 ml, 250 ml, 1000 ml)

JBL PRONOVO SPIRULINA FLAKES M

Product information

Spirulina are blue-green algae, of which some species, such as the *S. platensis* processed here, have ideal protein contents for feeding ornamental fish. By the way, the spirulina content of 20 % in JBL PRONOVO SPIRULINA food is perfect - more would not be healthy for the fish! The natural astaxanthin (a carotene) in the algae causes the beautiful colouring of the fish. This is another reason why spirulina algae are very popular for feeding ornamental fish.

Probiotic or prebiotic - which is better?

Probiotic foods, such as some types of yoghurt, contain live bacterial cultures to promote health, but only when consumed in large quantities. Such foods, including probiotic fish food, can easily spoil and then have the opposite effect. The positive effect on health is, by the way, quite controversial. Prebiotics are "substrates that are selectively used by host microorganisms and confer health benefits." Scientists are agreed on this that they promote digestion and thus health. In the case of our fish, there is another essential aspect: with better digestion, less is excreted and the water is thus less polluted, causing fewer algae problems and keeping the water cleaner.

Flakes or granulate?

To be honest, it's absolutely a matter of opinion! There are only a few arguments for or against the type of food. If you use an automatic feeder like the JBL AutoFood, you **MUST** choose granulated food, as almost all automatic feeders are only suitable for granulates. If you're planning to use an automatic feeder for your next holiday, get your fish used to the granulated food from the automatic feeder **IN GOOD TIME**. Some fish actually find it a little difficult to switch from granulate to flake or vice versa. Imagine you have always eaten soft cornflakes and now you're given wholemeal muesli for the first time.

JBL PRONOVO SPIRULINA FLAKES M

Food type	food flakes
Sub product type	complete food for ornamental fish
Dosing	Feed 1 - 2 times a day, as much as can be eaten within a few minutes

Analytical components

Crude protein	35 %
Fat content	5 %
Crude fibre	2 %
Crude ash	8 %

Composition

spirulina
salmon meal
shrimp meal
wheat meal
corn meal
soy bean meal
rice meal
wheat germs
yeast extract
wheat gluten
Potato flakes
Apple fibre
guar gum

Additives

Colourings
are not added by JBL

Antioxidants
1b306(i)
