

JBL PROFLORA u001

Pressure reducer

Suitable for:    

- Safe and exact CO2 dosing for aquariums: precision pressure reducer for disposable CO2 cylinders. Cylinder pressure regulation from 60 to 1.5 bar
- Easy to use: screw fitting onto the disposable cylinder (thread M10x1). Connect the pressure reducer with hose to the diffuser in the aquarium. Adjust CO2 bubble count at fine needle valve
- Fine needle valve: exact adjustment of bubble count, preadjusted working pressure: 1.5 bar (readjustment possible), 2 pressure gauges: working and cylinder pressure, connection thread: M 10 x 1
- Safe to use: excess pressure safety valve, highest reliability: diaphragm controlled pressure reducer
- Package contents: pressure reducer for disposable CO2 bottles, ProFlora u001

JBL PROFLORA u001

Accessories

JBL PROFLORA Direct
 High performance direct diffuser for CO₂

JBL PROFLORA Adapt u-m
 Conversion adapter for the change over from disposable to refillable cylinder system

JBL PROFLORA 3 x u500
 CO₂ disposable storage cylinder

JBL PROFLORA u500
 500 g disposable CO₂ storage cylinder

JBL PROFLORA T3
 Special hose for CO₂ systems in aquariums

JBL PROFLORA v002
 Noiseless solenoid valve

JBL PROFLORA Taifun Extend
 Extension for CO₂ high-performance diffuser

JBL PROFLORA Taifun M
 CO₂ high-performance diffuser

JBL PROFLORA Taifun S
 Extendable CO₂ diffuser for small aquariums

JBL PROFLORA Taifun P
 Mini CO₂ diffuser for nano freshwater aquariums

JBL PROFLORA u001

Spare parts

JBL ProFlora "u" flat seal

JBL ProFlora "u/m" flat seal

JBL ProFlora "u" O-ring seal

JBL ProFlora Allen key 6mm

JBL tube screw connection 4/6 pressure reducer

JBL PROFLORA u001

Product information

Easy to install:

Screw the fitting onto the disposable CO2 cylinder. Connect the pressure reducer with a hose to the diffuser in the aquarium. Adjust the CO2 bubble count with the fine needle valve. The two pressure gauges indicate the cylinder and the working pressure.

Hazard-free use:

The pressure reducer is equipped with an excess pressure safety valve. This ensures a safe release if the working pressure is set too high, without damaging the fitting. The diaphragm control of the pressure reducer ensures absolute reliability. Tip: With the purchase of the adapter JBL ProFlora Adapt u-m the fitting can be converted to a refillable cylinder system.

Function of the pressure reducer:

To reduce the pressure from the pressurised gas cylinder, a pressure reducer is screwed on (JBL PROFLORA u001 or m001). It reduces the 50-60 bar cylinder pressure to a working pressure of approx. 1.5 bar. This 1.5 bar is then dosed so precisely by a small hand wheel (fine needle valve) that individual CO2 bubbles are visible and countable in the connected bubble counter. On some pressure reducers the cylinder pressure and the working pressure are displayed on manometers. Strictly speaking, these displays are not absolutely necessary because the cylinder pressure does not slowly drop as with diving cylinders with compressed air and one would thus be warned when the cylinder is running low. Instead, the pressure stays at its maximum pressure and then drops to zero in no time. So unfortunately there is no slow decrease of the cylinder filling pressure. The working pressure would only be important if it had to be adjusted. But this is normally not necessary. But somehow, most people feel better if the two pressure gauges provide them with pressure indications.
