

JBL StabiloPond KH

pH balancer for garden ponds

Suitable for:  

- Natural pond water balance: granulate to stabilise the pH value in the pond between 7.5 and 8.5 to successfully combat algae in the garden pond
- Easy to use: tells you the required quantity, you spread it on the pond
- Life insurance for fish and plants: prevents fish loss during algae blooms
- No risk for fish and plants, ecologically balanced: precise increase of carbonate hardness to stabilise the pH value and to provide the best start conditions for the anti-algae agent to work effectively
- Contents: pH/KH balancer, StabiloPond KH. For first time use or with carbonate hardness 0: 200 g/1000 l pond water, for repeated use: 100 g/1000 l pond water

JBL StabiloPond KH

Product information

Immediate aid for ponds before you start with the combating of algae
If you do not use JBL StabiloPond Basis regularly, you need to increase the carbonate hardness before combating algae in order to stabilise the pH value and to make sure that the anti-algae agent works at all. We recommend you do that the evening BEFORE you add the anti-algae agent the next morning.

JBL's zero-risk concept

Algae can pollute the pond water and thus cause damage to the fish and the plants in the pond. In collaboration with scientists JBL has developed a concept for a permanent removal of algae.

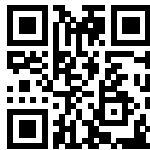

"1-2-3 algae-free"

1. Stabilise the water: increase the mineral content for anti-algae agents (JBL StabiloPond) to work more effectively
2. Combat algae: add a suitable anti-algae agent (JBL AlgoPond) into the water
3. Limit nutrients: remove the nutrients of dying algae (JBL PhosExPond)

Stabilo Pond KH is easy to use

Determine the required quantity for the garden pond. Spread the calculated quantity widely over the pond. Always use the granulate with a KH lower than 4 (best in the evening), before starting measures to combat algae, during algae blooms or after heavy rainfalls.

Dosage: 100 g granulate for 1000 l pondwater.
