

JBL PROAQUATEST COMBISET Plus Fe

Test case with most important water tests + iron test

Suitable for:

- Monitors the water values in aquariums simply and reliably. Determines: pH value, carbonate hardness, iron, nitrite, nitrate, CO₂ (calculation via table)
- Easy to use: add aquarium water to cuvette with syringe, add indicator and compare colour on colour scale, or count drops until colour changes in KH test
- Comparator system takes the inherent water colouring into account. CO₂-content is determined by pH value and KH value using the table
- Childproof reagent bottles, waterproof plastic case, refill reagents separately available
- Package contents: 1 test case for aquariums. 7 reagents, 3 glass vials, syringe, measuring spoon, comparator block, plastic cuvette, colour charts, report sheets, operating instructions

Product information

Healthy aquariums with conditions close to nature

The right water values are dependent on the fish stock and the plants in the aquarium. Even if the water looks clear it can be contaminated. Bad values can cause diseases or algae in the aquarium. To maintain a healthy aquarium with conditions close to nature it is important to check and adapt the water values regularly. With JBL water tests you can determine all relevant water values quickly, easily and very precisely.

following tests are included in the set:

pH test: acidity of the water from 3.0 to 10

To determine the CO₂ content, it is sufficient to measure the pH and KH. These two values determine the CO₂ content of the water, which can then be found in the enclosed table.

KH test: pH stability of the water (carbonate hardness)

NO₂ test: determination of nitrogen compound nitrite, which is toxic for the fish

NO₃-Test: determination of the nitrate content (reason for algae growth and plant nutrient)

Fe test: determination of the iron content to monitor the fertilisation

The following tests are available as supplements:

pH test: acidity of the water from 6.0 to 7.6

pH test: acidity of the water from 7.4 to 9.0

O₂ test: determination of the oxygen content

CO₂ Direct test: determination of the current carbon dioxide content for thriving plant growth

GH test: determination of general hardness

PO₄ test: determination of the phosphate content (reason for algae growth and plant nutrient)

Test NH₄ / NH₃: indication of non-toxic ammonium, determination of the toxic ammonia using table

Cu Test: heavy metal deadly for invertebrates. Also important for adjusting the therapeutic dose of medications

SiO₂ test: determination of the silicates (silicic acid) as cause for diatoms

Almost all test reagents are available as environmentally friendly refill packs!

You can analyse the water values you have measured in the JBL Online Laboratory free of charge and receive recommendations.
