Product information

Healthy Pond Environment

A freshwater supply, such as rain, tap or well water can have a negative influence on pond water. Regular checks of the water values can detect negative changes and remedy them immediately to maintain a healthy pond environment.

Healthy fish – healthy pond

The water conditioner BiotoPond protects gills, skin and fins of the fish through protective organic colloids and nourishes them with aloe vera. A vitamin B complex protects the fish against stress and reduces the risk of diseases. Poisonous heavy metals such as copper, lead, zinc, e.g. from rain gutters, are neutralized permanently. Dangerous chlorine and chloramine from tap water are eliminated quickly and completely. JBL BiotoPond makes iron available to plants and promotes plant growth, as iron can only be absorbed by plants into the leaves in the presence of a chelator (nutrient carrier). In nature humic substances often act as nutrient carriers. JBL BiotoPond then takes care of this task.

Correct use of the water conditioner

Shake the bottle vigorously for one minute. Mix the required quantity with pond water in a watering can and distribute it evenly over the pond.

Dosage

30 – 50 g/1000 l pond water.
