JBL Pond Thermometer

Product information

The right pond care for every season

Each temperature requires different pond care to ensure a healthy pond environment. It depends on the water temperature whether you aerate additionally or select a special food. The colder the temperature, the slower the metabolism and the energy requirements of the fish are. The fish's energy requirements increase conversely in summer. JBL has the right food for each season and each fish size. The high-quality ingredients are a direct result of the practical research of the JBL research team.

Convenient to use

JBL's floating pond thermometer precisely indicates temperatures between 0 and 50 °C. Its 5 m long nylon cord makes the thermometer convenient to use. The temperature is measured at a depth of 20 cm.

JBL recommendation

Above 28 °C, aerate additionally.

Below 15 °C, feed dedicated low-temperature food.

At 4°C: switch off any technical equipment (e.g. water clarifier).
